IDYNTA SYSTEMS, INC. INTRODUCES BIOMETRIC COMPUTER FINGERPRINT TECHNOLOGY TO THE CHICAGO HOUSING AUTHORITY

June 24, 2002

The Chicago Housing Authority (CHA) has recently begun implementing advanced Biometric fingerprint technology to increase computer network security as well as streamline password control and maintenance for its 500 employees and CHA Property Managers.

The technology, developed by Biolink and distributed by Idynta Systems, Inc. allows companies to utilize advanced fingerprint matching and identification to help increase security and reduce costs from the ongoing maintenance and support usually needed for end-users. Instead of distributing passwords that need to be changed every 30 days, employees can log in to their computer network biometrically by using their unique fingerprint.

The BioLink U-Match® Mouse, a patented fingerprint scanning methodology, scans the individual's thumbprint, and securely identifies the user to the system while the BioLink Authenticon Server can search and match fingerprint submissions against a large database of authorized users in the network. These identification tools greatly reduce the chance of password theft, along with the time needed to update passwords on a regular basis. The Biolink system also reduces technology help desk calls, thereby lowering staffing and other costs needed to support those calls.

"We are very excited about the BioLink security system," said Walter Smith, Chief Information Officer at the CHA. "Security is extremely important to us and our employees are using the system to access all of their computer applications. This is an important first step towards implementing greater security throughout CHA's corporate and property management offices."

About IDynta Systems, Inc.

IDynta Systems, Inc. is a security and biometric distribution and reselling company bringing advanced 21st century security solutions to governments (federal/state/local), hospitals, healthcare organizations, schools, and small to large networks. Based in the hub of the Midwest technology corridor, IDynta Systems, Inc. is using their expertise to deliver advanced biometric security to the Midwest's technically savvy residents. IDynta Systems, Inc. has brought biometric security to a wide range of users, from large corporate entities, to small business owners. For additional information visit IDynta at

About BioLink Technologies

BioLink, a leading security technology provider, develops, manufactures, and markets advanced fingerprint biometric products. These solutions for the core of biometric user authentication systems for computer network resources, eCommerce platforms, and physical access solutions. BioLink offers a comprehensive suite of products using proprietary fingerprint scanning, image processing, and one-to-many identification technologies that address many of today's security challenges in a significantly more robust and cost-effective manner than existing solutions. BioLink's solutions are being implemented by corporate and government entities worldwide. For additional product information please visit BioLink's web site at www.biolinkusa.com
